

NEWS RELEASE

PORTOFINO SUBMITS FINAL PROPOSALS REGARDING ARIZARO LITHIUM CONCESSIONS-SALTA, ARGENTINA

Vancouver, B.C., August 23, 2023. **PORTOFINO RESOURCES INC. (TSX-V: POR) (OTCQB: PFFOF) (FSE: POTa) (“Portofino” or the “Company”)** announces that it has submitted detailed proposals through a public tender process in Salta, Argentina, for two contiguous lithium concessions, sub-areas III and IV, within the highly coveted, Arizaro Salar (see **Figure 1**). The tender submission deadline has now lapsed, and while the Company’s success in the process is not guaranteed, the initial, (official) feedback suggests that the Company’s financial proposals are extremely competitive with other major lithium participants. Additional aspects of the tender submissions, including community impact, sustainability and community/regional benefits, are also being assessed by officials and results are anticipated to be announced in the second half of September.

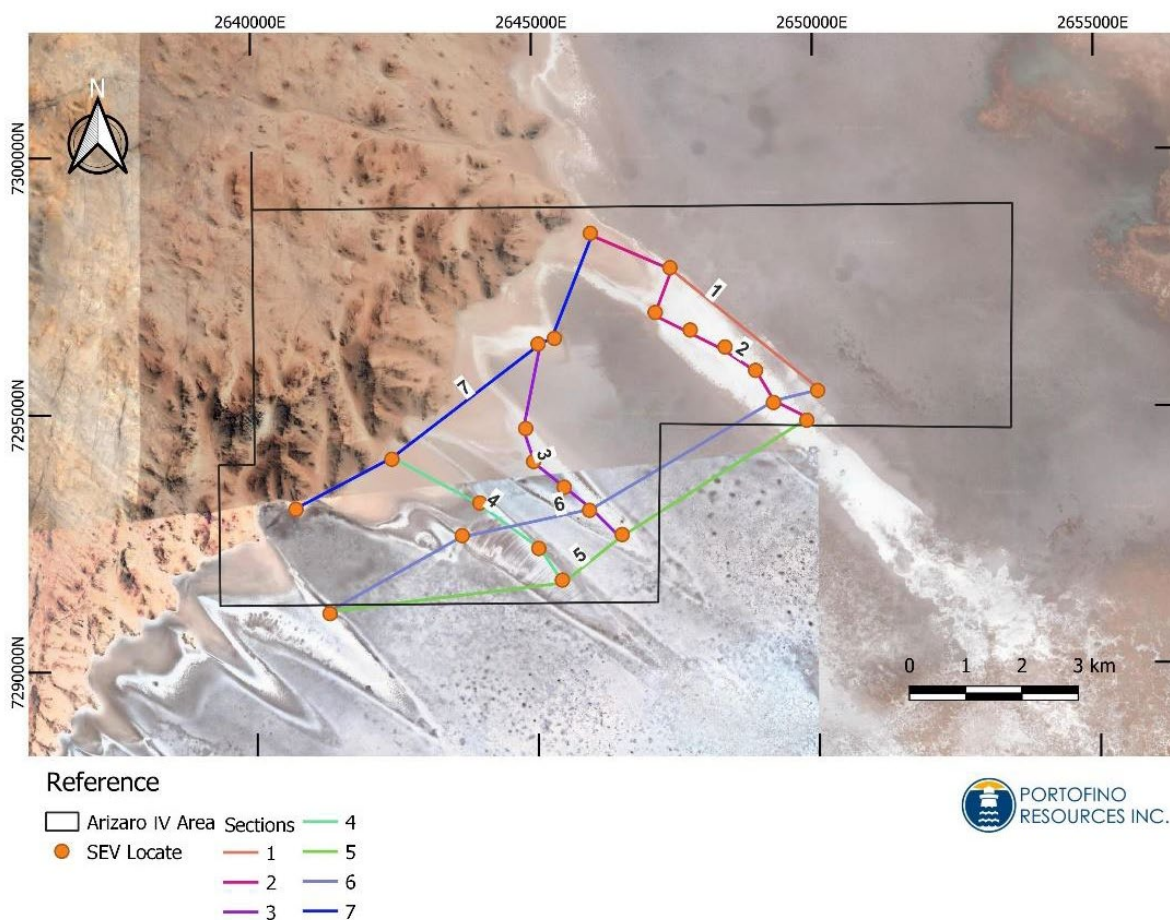

Figure 1: REMSa IX, Sub-Area III and IV

In conjunction with the state-owned resource company in Salta, the Company previously carried out extensive geological due diligence on one of the two concession areas, referred to as Arizaro IV. Initial surface exploration work on this 8,445-hectare block has revealed a thick overburden (crust), however, samples at surface still assayed as high as 100 milligrams per litre (“mg/l”) lithium, which is consistent with surface results of other groups exploring this mature salar. Additional exploration activity included:

1. 40 +surface brine samples collected and analysed;
2. 35 trenches reaching shallow water tables using excavation equipment;
3. 69,000 metres (“m”) of geophysical surveying utilizing Vertical Electric Soundings (“VES”) technology revealing aquifer depths up to 1,000m; and
4. Low resistivity horizons being identified and interpreted as brine targets potentially containing large concentrations of lithium (see Figure 2).

Figure 2: Arizaro Project Distribution of resistive sections

The VES results with the largest thickness in the low resistivity layer are anticipated to be the highest prospective areas of interest and are located to the east and south. The explored area shares geological characteristics with other areas in the same salt flat where brines with high lithium content have been detected at depth. Adjacent properties within the Arizaro salar, have been drilled to depths of more than 500 m, yielding prospective levels of 300 m to 400 m with >500 mg/L lithium.

David Tafel, CEO of Portofino, commented: ***“Our legal, operations, and geological teams have presented two very thorough, well researched and competitive Arizaro Salar partnership proposals and we remain confident our efforts will be rewarded. Concurrent to our Arizaro proposal submissions, and pursuant to the recent news on the Yergo Lithium Project ([POR News Release 14-AUG-2023](#)), the team has commenced preparation of an amended drill permit in anticipation of closing the concession buyout mid-September.”***

Qualified Person

The technical content of this news release has been reviewed and approved by Mike Kilbourne, P.Geo., who is a Qualified Person (“QP”) as defined by National Instrument 43-101, Standards of Disclosure for Mineral Projects. The QP has not completed sufficient work to verify the historic information on the properties in Argentina and neighbouring companies.

About Portofino Resources Inc.

Portofino is a Vancouver-based Canadian company focused on exploring and developing mineral resource projects in the Americas. Portofino has an opportunity to earn a majority interest in several lithium projects in Salta, Argentina and up to 100% of the (2932 hectare) Yergo Lithium property in Catamarca. The properties are situated in the heart of the world-renowned Argentine Lithium Triangle and in close proximity to multiple world-class lithium projects. The Company also has the right to earn 100% interest in three northwestern Ontario, Canada lithium projects: Allison Lake North, Greenheart Lake and McNamara Lake.

Portofino’s South of Otter and Bruce Lake projects are in the historic gold mining district of Red Lake, Ontario, Canada proximal to the Dixie gold project discovered by Great Bear Resources and now owned by Kinross Gold Corp. In addition, Portofino holds three other northwestern Ontario gold projects; the Gold Creek property located immediately south of the historic Shebandowan mine, as well as the Sapawe West and Melema West properties located in the rapidly developing Atikokan gold mining camp.

ON BEHALF OF THE BOARD

“David G. Tafel”

Chief Executive Officer
